

COMMUNIQUÉ

BEWARE OF PHISHING ATTEMPTS

The Banco de Moçambique has learned of the occurrence of several instances of online banking fraud, including scams and others of similar nature, through phishing techniques against customer accounts at banking institutions. This malicious action consists of using messages to obtain personal data.

In this light, the Banco de Moçambique recommends credit institutions and financial companies based in Mozambique, as well as the general public, to comply with computer security rules and due diligence concerning financial operations.
